

AI Workflow Audit and Tool Setup

Name: Jackline Mutheu

Weekly Workflow Audit

Weekly Task	Classification	Why?
Study Machine Learning lessons	Collaborate with AI	AI helps explain difficult concepts, but I complete the exercises myself.
Complete FlyRank assignments	Collaborate with AI	AI helps me understand the instructions, but I do the work and submit it.
Debug Python code	Delegate to AI with review	AI suggests solutions, but I test the code before using it.
Write GitHub README files	Delegate to AI with review	AI improves my writing, but I make sure everything is correct.
Organize my GitHub repository	Just me	I decide how to organize my own projects.
Learn Python programming	Collaborate with AI	AI explains coding concepts while I practice writing the code.
Research Machine Learning topics	Collaborate with AI	AI summarizes information, but I verify and study it myself.
Create a study timetable	Delegate to AI with review	AI suggests a schedule, and I adjust it to fit my routine.
Create YouTube content ideas	Collaborate with AI	AI helps me brainstorm ideas, but I decide what to create.
Pray and read the Bible	Just me	My relationship with God is personal and should not be delegated to AI.
Write project documentation	Delegate to AI with review	AI helps create a draft, but I review and edit it before publishing.
Practice Google Colab notebooks	Just me	I need to complete the coding practice myself to learn.

My Three Target Tasks

1. Complete FlyRank Assignments

Success means:

- I understand the assignment requirements.
 - I complete every required task.
 - I submit my work before the deadline.
-

2. Learn Machine Learning

Success means:

- I finish the weekly notebooks.
 - I understand the main ideas.
 - I can explain what I learned in my own words.
-

3. Build My GitHub Portfolio

Success means:

- Every completed assignment is uploaded.
 - My repository is well organized.
 - My projects include clear documentation.
-

AI Tools I Set Up

-  ChatGPT
 -  Claude
 -  Anthropic Academy
-

Reflection

This activity helped me think about how I use AI in my weekly work. I learned that AI is most helpful for explaining concepts, generating ideas, improving writing, and assisting with coding. However, I also realized that some tasks should remain my responsibility, such as organizing my work, practicing programming, and

my personal faith. Going forward, I will use AI as a learning partner instead of depending on it to do everything for me.
